

Professional Camera Accessories ARRI Quality for Film and Digital Applications

MMB-1 Accessories

Building on the success of the MMB-1 system designed for smaller handheld HD cameras, ARRI has designed a number of new accessories to maximize the cross compatibility of the system.

- Top and side flags for greater light control.
- 138mm to 130mm adapter for compatibility with the MB-20 clamp adapter rings.
- Filter frames for 4 x 4 and a 4 x 5.65 with closed corners.
- Retrofit kit to adapt the rear stage to a top-loading configuration.
- Retrofit kit for a 143mm will accommodate the standard MB-20 bellows rings.

MB-28 Mattebox

ARRI's newest mattebox designed specifically to fit the Angenieux Optimo 24-290mm zoom in addition to prime lenses. One, three-stage mattebox can now cover both needs.

- 6.6 x 6.6 wide angle compact swing away mattebox
- Two fixed trays independently rotatable 360° from the rear stage.
- 4 x 5.65 reduction tray inserts for smaller filter sizes.
- Rear bellows hold 6" round filters and use standard MB-20 reduction rings.
- Available for 15mm and 19mm bridgeplates as well as Panavision standards.

Professional Camera Accessories ARRI Quality for Film and Digital Applications

PL Mount Director's Viewfinder

The new ARRI finder is a compact handheld unit for viewing through the lens without the need for a camera. Ground Glasses are the standard ARRIFLEX 435 frame with hundreds of 35mm formats available.

- Ground Glass for RED with 4K 16:9 and 2:1 active sensor area frame lines.
- Custom formats using the ARRI Ground Glass On Demand Composer.
- Compatible with all PL mounted lenses and digital specific zooms such as the Angenieux Rouge.
- The finder covers the full ANSI Super 35 format.

Wireless Lens Control System

ARRI has designed a new Wireless Lens Control System suitable for up to three-axis control with the addition of the ZMU-3. The Wireless Compact Unit WCU-3 handset has the capability to control two axis, plus camera run/stop. Universal Motor Controller UMC-3A will accept either 12v or 24v input. To complete the system, the CLM-3 Lens Control Motor is the fastest, most powerful lens motor ever created.

- Rugged and weatherproof for demanding production environments.
- Built-in programmable full size focus knob and thumb slider.
- Powered up to 12 hours with readily available camcorder batteries.
- UMC-3A can be powered from an external battery or the camera.
- Perfect for larger zooms that other motors have difficulty operating.
